

St. John's Municipal Habitat Stewardship Agreement

The City of St. John's and the Government of Newfoundland and Labrador signed a **MUNICIPAL HABITAT STEWARDSHIP AGREEMENT** in 2004

The agreement designates Lundrigan's Marsh as a conservation area, totalling 55.8 acres. It is part of the larger Virginia River Watershed. The area acts as a catchment basin and filtering system that slowly cleanses organic material and silt from the water draining through it before entering the Virginia River. Popular among birdwatchers for its occurrence of rare bird species. It is the largest cattail marsh in eastern Newfoundland.

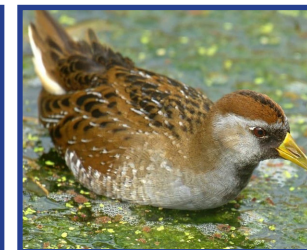

Lundrigan's Marsh

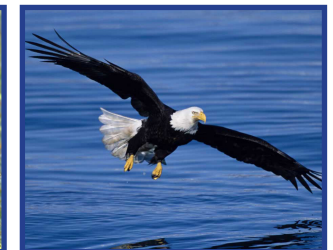

What to look & listen for!

Snowy Egret
Egretta thula
(rare)

Sora
Porzana carolina

Bald Eagle
Haliaeetus leucocephalus
