

St. George's Municipal Habitat Stewardship Agreement

The Town of St. George's and the Government of Newfoundland and Labrador signed a **MUNICIPAL HABITAT STEWARDSHIP AGREEMENT** in 2021, committing to the conservation and enhancement of wildlife habitat within the town's planning boundaries.

The agreement designates Sandy Point as a Stewardship Zone, with Sunset Trail Barachois Pond, Flat Bay Brook and Estuary, and Barachois Brook Bridge designated as Conservation Areas.

What to look for!

Piping Plover

Bohemian Waxwing

Canada Goose

The community of St. George's is home to significant wildlife populations, including a large number of birds, rare plants, mammals, and salmon, among others: research of existing databases and field assessments indicate that several formally designated "Species at Risk", including the Piping plover, Banded killifish, Marginal woodfern, Newfoundland marten, and several "rare" species of plants have been documented within the planning boundaries of the Town. In addition, St. George's coastline and inland wetland are home to a number of waterfowl, shorebirds, and passerines (songbirds). Significant salmon rivers also run through the Town boundary, which supports a strong angling and fishing tradition in the community. Sandy Point is remarkable for its unique geography comprised of tidal flats, salt marshes and sandy beaches which form ideal habitat
